Java Micro Edition
Overview

- predecessors
  - Personal Java (1997)
  - Embedded Java (1998)
- JME definition – via JCP
  - JCP – Java Community Process
- JME is not a single SW package
  - a set of technologies and specifications
  - defines
    - configuration
    - profiles
    - optional packages
Java platform

- JSE – standard edition
- JEE – enterprise edition
- JME – micro edition
Architecture

- several layers
- **configuration**
  - VM specification
  - core API
  - requirements on device (memory, CPU,...)
- **profile**
  - API for application creation (for specific devices – mob. phone, PDA,...)
  - application lifecycle, GUI,...
- **optional packages**
  - APIs for specialized services
Software

• Java ME SDK
  - http://www.oracle.com/technetwork/java/javame/
Technology overview

- JSR 30 – CLDC 1.0 – Connected, Limited Device Configuration
- JSR 139 – CLDC 1.1 – Connected, Limited Device Configuration 1.1
- JSR 36 – CDC – Connected Device Configuration
- JSR 218 – CDC 1.1 – Connected Device Configuration 1.1
- JSR 37 – MIDP 1.0 – Mobile Information Device Profile
- JSR 118 – MIDP 2.0 – Mobile Information Device Profile 2.0
- JSR 271 – MIDP 3.0 – Mobile Information Device Profile 3.0
- JSR 46 – FP – Foundation Profile
- JSR 129 – PBP – Personal Basis Profile
- JSR 62 – PP – Personal Profile
- JSR 82 – BTAPI – Java APIs for Bluetooth
- JSR 120 – WMA – Wireless Messaging API
- ...
Configuration

- core specification
- intended for a large family of devices with similar features
- defines
  - requirements on CPU, MEM, net connectivity
  - features of VM
  - core API (derived from JSE)
- configurations
  - CLDC – Connected, Limited Device Configuration
    - mobile phones, PDA,...
  - CDC – Connected Device Configuration
    - PDA, navigation systems, set-top boxes,...
Profile

- over a configuration
- adds API for application creation
  - defines
    - application lifecycle
    - API for GUI
    - data persistence
    - ...
- over CDLC
  - MIDP – Mobile Information Device Profile
- over CDC
  - Foundation Profile
  - Personal Profile
CLDC 1.0

• the smallest configuration
• for small devices with limited resources
• HW requirements
  – 16-bit or 32-bit processor
  – 128 kB permanent memory, 32 kB operating memory
  – energy source – battery
  – slow connection to network
• limited VM
  – KVM (Kilo VM)
CLDC 1.0 – KVM

- no floating-point operations and types
- no object finalization
- limited set of exceptions
- no
  - JNI
  - reflection
  - user defined classloaders
  - deamon threads and thread groups
  - weak references
- security model – sandbox
- two phases of code verifications
CLDC 1.0 – KVM – verification

- regular byte-code verification – resource demanding
  - size 50 kB, operation memory up to 100 kB
  - CPU performance demanding
- divided to two parts
  - preverification
    - during development
      - typically performed by a developer
    - the StackMap field added to every class
    - some instructions (jumps) replaced by equivalent ones
    - size of a class increased by approx. 5%
  - verifications
    - only linear analysis
    - fast, nondemanding
      - verifier size ~ 10 kB, operating memory < 100 B
CLDC 1.0 – API

- java.lang
  - Object, Class, Runtime, System, Thread, Runnable, String, StringBuffer, Throwable
  - Boolean, Byte, Short, Integer, Long, Character
  - Math
- java.util
  - Vector, Stack, Hashtable, Enumeration
  - Date, Calendar, TimeZone
  - Random
- java.io
  - InputStream, OutputStream, ByteArrayInputStream, ByteArrayOutputStream, DataInput, DataOutput, DataInputStream, DataOutputStream, Reader, Writer, InputStreamReader, OutputStreamWriter, PrintStream
• Generic Connection Framework
  - javax.microedition.io
  - streams
  - a common abstraction for different kinds of connections
  - Connector.open("<protocol>:<address>;<parameters>")
  - e.g.:
    • Connector.open("http://www.foo.com");
    • Connector.open("socket://129.144.111.222:9000");
    • Connector.open("comm:0;baudrate=9600");
    • Connector.open("datagram://129.144.111.333");
    • Connector.open("file:/foo.dat");
  - no implementation at the configuration level
CLDC 1.1

- support of floating-point operations
- weak references
- enhanced classes Date, Calendar, TimeZone
- threads has names
- minimal required memory 192 kB
CDC

- 32-bit processor, 2 MB RAM, 2.5 MB ROM
- VM – complete features of JSE VM
- CDC is superset of CLDC
- java.io, java.util.zip, java.util.jar, java.net, java.security
CDC profiles

- Foundation Profile
  - core profile
  - no GUI
  - text manipulation, HTTP, sockets
  - java.math
  - java.util.zip, java.util.jar
  - certificates, encryption

- Personal Basis Profile
  - over FP, subset of PP
  - part of AWT, JavaBeans support
  - application – Xlet
  - RMI communication

- Personal Profile
  - similar to JSE
  - complete AWT
MIDP

- Mobile Information Device Profile
- over CLDC
- for mobile phones
- HW requirements (MIDP 1.0)
  - display min. 96x54x1
  - aspect ratio 1:1
  - keyboard or touch screen
  - 128 kB permanent memory
  - 8 kB permanent memory for applications data
  - 32 kB operating memory
  - duplex connection to network
- HW requirements (MIDP 2.0)
  - 256 kB permanent memory
  - 128 kB operating memory
  - sound
MIDP 1.0

- application – MIDlet
- support for GUI
- support for network communication (GCF)
  - HTTP
- persistent application data
  - Record Management Storage (RMS)
- over the air (OTA)
  - a way to install application to a device
- packages
  - javax.microedition.midlet
  - javax.microedition.lcdgui
  - javax.microedition.rms
MIDP 2.0

- better support of network
  - HTTPS, TCP and UDP sockets
- multimedia support
  - Mobile Media API (MMAPI)
- support for game creation
  - GameCanvas, Layers, Sprites
- certificates, ...
- enhanced GUI
- push registry
  - launching MIDlets as a reaction to an incoming connection
- storage can be shared among several applications
MIDP 3.0

- JSR 271
  - December 2009
- parallel execution of several MIDlets and their communication
- support of IPv6
- LIBlets
  - shared libraries
MIDlet

- an application for MIDP
- similar to applets
- extends javax.microedition.midlet.MIDlet
- application lifecycle

- constructor
- startApp()
- pauseApp()
- destroyApp()
- Active
- Paused
- Destroyed
Methods of MIDlet

- **startApp()**
  - called when when the *ACTIVE* state is entered
  - intended to be overridden

- **pauseApp()**
  - called when when the *PAUSED* state is entered
  - intended to be overridden

- **destroyApp(boolean unconditional)**
  - called when when the *DESTROYED* state is entered
  - if the parameter is *false*, the midlet can refuse to be destroyed
  - intended to be overridden

- **notifyDestroyed()**
  - terminates the midlet (destroyApp is not called)
Methods of MIDlet (cont.)

• notifyPaused()
  – the midlet wants to enter the PAUSED state
  – the pauseApp is not called
    • similar to notifyDestroyed

• resumeRequest()
  – opposite to notifyPaused
  – the midlet wants from the PAUSED state to ACTIVE
  – can be called e.g. from a timer or a background thread
public class Main extends MIDlet {
    public Main() {
    }

    public void startApp() {
        Displayable current = Display.getDisplay(this).getCurrent();
        if (current == null) {
            HelloScreen helloScreen = new HelloScreen(this);
            Display.getDisplay(this).setCurrent(helloScreen);
        }
    }

    public void pauseApp() {
    }

    public void destroyApp(boolean b) {
    }

    void exitRequested() {
        destroyApp(false);
        notifyDestroyed();
    }
}
MIDlet UI

- a single window can be shown at a single moment
  - several windows – switching

    Display.getDisplay(this).setCurrent(helloScreen);

- if several MIDlets run concurrently, only one of them can access the display
MIDlet distribution

- 2 files
  - JAR archive – application code
  - JAD – Java Archive Descriptor
    - format
      - attribute-name: attribute-value
    - the same information must be also in the JAR manifest
- a JAD example

MIDlet-Name: HelloWorld
MIDlet-Version: 0.0.1
MIDlet-Vendor: PH
MIDlet-Jar-URL: HelloWorld.jar
MIDlet-Jar-Size: 1949
MIDlet-1: HelloWorld,,cz.cuni.mff.java.helloworld.Main
MicroEdition-Profile: MIDP-1.0
MicroEdition-Configuration: CLDC-1.0
MIDlet distribution (cont.)

• several midlets can be in a single package
  MIDlet-1: HelloWorld,,cz.cuni.mff.java.helloworld.Main
  MIDlet-2: HelloWorld2,,cz.cuni.mff.java.helloworld.Main2
  MIDlet-3: HelloWorld3,,cz.cuni.mff.java.helloworld.Main3

• the descriptor can contain user-defined attributes
  – can be obtained from the application
    • MIDlet.getAppProperty(String key)
Record Management Store

- storing byte arrays
  - it is not a filesystem
- each midlet has own storage
  - MIDP 2.0 – storages can be shared
- operations are atomic
- stored data are persistent
- if the midlet is removed from a device, its storage is also deleted
- the javax.microedition.rms package
  - the RecordStore class
    - openRecordStore()
    - addRecord()
    - getRecord()
GUI

- the java.microedition.lcdui package
- low-level
  - Canvas
    - drawing to display
    - handling keyboard/touch events
- high-level
  - device independent
  - low-level features cannot be influenced
    - fonts, etc.
  - portable
GUI – MIDP 2.0

- `javax.microedition.lcdui.game`
  - `GameCanvas`
    - extends `Canvas`
    - allows for
      - querying keys states
      - off-screen buffer
  - `Layer`
    - the abstract class for visible elements of a game
    - children
      - `Sprite`
      - `TiledLayer`
  - `LayerManager`
    - the manager of the visible elements
GUI – MIDP 2.0

- javax.microedition.media
  - playing multimédií
  - the Manager class
    - static methods
    - void `playTone` (int note, int duration, int volume)
    - String[] `getSupportedContentTypes` (String protocol)
    - String[] `getSupportedProtocols` (String content_type)
    - Player `createPlayer` (String locator)
    - Player `createPlayer` (InputStream stream, String type)
Optional packages

- extend profiles
- defined based on JCP
- separately for CLDC or CDC (or for both)

- Wireless Messaging API (WMA) JSR 120, JSR 205
- JME Web Services APIs (WSA) JSR 172
- Bluetooth API JSR-82

- JME RMI Optional Package (RMI OP) JSR 66
- JDBC Optional Package for CDC/Foundation Profile API JSR 169
Java ME 8

- 2014
- goal – unifying ME and SE
- CLDC 8
- MEEP 8
  - ME Embedded Profile 8
CLDC 8

- CLDC 8 – extended strict subset of SE 8

- VM supports
  Java VM specification for SE 7
    - without
      - the InvokeDynamic instruction
      - reflection and runtime annotations

- language almost as Java 8
  - without
    - lambda functions
    - reflection
    - serialization
    - JNI
    - user-defined classloaders
    - ...
CLDC 8

• verification
  - bytecode versions 51+ (JDK 7+)
    • without preverification
  - bytecode versions 48 and older (JDK 1.4)
    • mandatory preverification

• enhanced Generic Connection Framework
  - supporting more protocols
  - IP multicast
  - specific options for protocols
    • ConnectionOption
  - listing “access points”
    • 3GPP, CDMA, Wi-Fi,...

• supporting ServiceLoader
MEEP 8

- Java ME Embedded Profile (MEEP) 8
- built on CLDC 8
- profiles
  - minimal
    - core API, application model
    - minimum – 128 kB RAM & 1 MB Flash
  - standard
    - services, multitasking, ...
    - minimum – 512 kB RAM & 2 MB Flash
  - full
    - complete API
    - minimum – 2 MB RAM & 4 MB Flash
• packages
  - mandatory
    • javax.microedition.midlet
  - optional
    • javax.microedition.swm
    • javax.microedition.cellular
    • javax.microedition.event
    • javax.microedition.power
    • javax.microedition.io
    • javax.microedition.lui
    • javax.microedition.key
    • javax.microedition.media
    • javax.microedition.rms
• applications
  – MIDlets (IMlets), LIBlets

  – javax.microedition.midlet.MIDlet
    • notifyPaused(), pauseApp(), resumeRequest()
      deprecated

• services
  – ServiceLoader
  – service provider and consumer can be in different applications
• Device I/O API
  – accessing devices
  – GPIO, I2C, SPI, UART,...
Java Embedded

- a complete Java platform
- several variants
  - Java ME Embedded
  - Java ME Embedded Client
  - Java SE Embedded
  - Java Embedded Suite
Java ME Embedded

- based on JME and CLDC
- intended for microcontrollers, etc.
- headless
  - no UI
- platforms
  - ARM
    - Raspberry Pi
    - STM32F7
    - ...
- < 1 MB RAM
Java ME Embedded Client

- based on JME and CDC
- < 10 MB RAM
Java SE Embedded

- based on JSE
- ARM, x86
- JavaFX UI

- Starting with JDK 9, Oracle doesn't plan to offer a separate Java SE Embedded product download.
Java Embedded Suite

- Java SE Embedded
  + „enterprise“ features
  - JavaDB
  - servlets
  - RESTFull web services
