

# Assignment 2: Software Requirements Specification

## Preparation

- Make yourself familiar with IEEE Recommended Practice for Software Requirements Specifications

## Assignment

Derive the SRS from the KAOS model you've created in the Assignment 1. You do not have to provide a full-blown specification. A numbered list of requirements which can be then used for test-case generation (in Assignment 3) is enough. If possible, establish the traceability of the requirements to the original document (RoboCup Challenge specification)
