1 Technology Overview

Technology Overview

Goals
Provide platform independent structured data serialization framework.

Features
- Platform independent data description language.
- Serialization code generation for multiple languages (C++, Java, Python, Go, Ruby, JavaScript, Objective C, C# ...).
- Binary transport format with compact data representation.
- Textual transport using JSON.

... http://developers.google.com/protocol-buffers

Examples To Play With ...

> git clone http://github.com/d-iii-s/teaching-introduction-middleware.git

C

> cd teaching-introduction-middleware/src/protocol-buffers-basic-usage/c
> cat README.md

Java
Python

```bash
> cd teaching-introduction-middleware/src/protocol-buffers-basic-usage/python
> cat README.md
```

---

### Message Specification Example

```protobuf
syntax = "proto3";

package example;

message AnExampleMessage {
    uint32 some_integer = 1;
    sint32 another_integer = 2;
    string some_string = 8;
    repeated string some_more_strings = 11;
}

message MoreExampleMessages {
    repeated AnExampleMessage messages = 1;
}
```

---

## 2 Assignment Part I

### Assignment

**Server**

Implement a server that will provide information on current time.

- The server should accept a spec of what fields to return.
- Fields should be standard YYYY-MM-DD HH:MM:SS.

**Client**

Implement a client that will query server time:

- Pick a random combination of fields.
- Query information on current time.
- Print the time.

**Interoperability**

Implement compatible clients and servers in two languages.

---

## 3 Message Encoding

### Message Encoding

**Goals**

Compact structure with support for field removal and addition.

**Features**

- Sequence of field key value pairs.
- Key is field index and type indication.
  - One of variable integer, explicit length, fixed length.
Variable Length Encoding

Goals
Support integers clustered around zero more efficiently.

Features
- Integer stored as variable number of 7 bit values.
- High bit set to zero for last byte.
- Little endian byte order.
- Signed variant.

4 Message Specification

Primitive Field Types

Integer Types
(s)fixed(32|64) Integers with fixed length encoding.
(u)int(32|64) Integers with variable length encoding.
sint(32|64) Integers with sign optimized variable length encoding.

Floating Point Types
float IEEE 754 32 bit float.
double IEEE 754 64 bit float.

Additional Primitive Types
bool Boolean.
bytes Arbitrary sequence of bytes.
string Arbitrary sequence of UTF-8 characters.

More Field Types

Oneof Type
message AnExampleMessage {
  oneof some_oneof_field {
    int32 some_integer = 1;
    string some_string = 2;
  }
}

Enum Type
enum AnEnum {
  INITIAL = 0;
  RED = 1;
  BLUE = 2;
  GREEN = 3;
  WHATEVER = 8;
}
More Field Types

Any Type
import "google/protobuf/any.proto";
message AnExampleMessage {
  repeated google.protobuf.Any whatever = 8;
}

Map Type
message AnExampleMessage {
  map<int32, string> keywords = 8;
}

5 Message Manipulation

C++ Message Basics

Construction
AnExampleMessage message;
AnExampleMessage message (another_message);
message.CopyFrom (another_message);

Singular Fields
cout << message.some_integer ();
message.set_some_integer (1234);

Repeated Fields
int size = messages.messages_size ();
const AnExampleMessage &message = messages.messages (1234);
AnExampleMessage *message = messages.mutable_messages (1234);
AnExampleMessage *message = messages.add_messages ();

C++ Message Serialization

ByteArray
char buffer [BUFFER_SIZE];
message.SerializeToArray (buffer, sizeof (buffer));
message.ParseFromArray (buffer, sizeof (buffer));

Standard Stream
message.SerializeToOstream (&stream);
message.ParseFromIstream (&stream);

Java Message Basics

Construction
AnExampleMessage.Builder messageBuilder;
messageBuilder = AnExampleMessage.newBuilder ();
messageBuilder = AnExampleMessage.newBuilder (another_message);
AnExampleMessage message = messageBuilder.build ();

Singular Fields
System.out.println (message.getSomeInteger ());
messageBuilder.setSomeInteger (1234);

Repeated Fields
int size = messages.getMessagesCount ();
AnExampleMessage message = messages.getMessages (1234);
List<AnExampleMessage> messageList = messages.getMessagesList ();
messagesBuilder.addMessages (messageBuilder);
messagesBuilder.addMessages (message);

Java Message Serialization

Byte Array
byte [] buffer = message.toByteArray ();
try {
    AnExampleMessage message = AnExampleMessage.parseFrom (buffer);
} catch (InvalidProtocolBufferException e) {
    System.out.println (e);
}

Standard Stream
message.writeTo (stream);
AnExampleMessage message = AnExampleMessage.parseFrom (stream);

Python Message Basics

Construction
message = AnExampleMessage ()
message.CopyFrom (another_message)

Singular Fields
print (message.some_integer)
message.some_integer = 1234

Repeated Fields
size = len (messages.messages)
message = messages.messages [1234]
message = messages.messages.add ()

Python Message Serialization

Byte Array
buffer = message.SerializeToString ()
message.ParseFromString (buffer)
message = AnExampleMessage.FromString (buffer)
Standard Stream

```python
file.write(message.SerializeToString())
message.ParseFromString(file.read())
AnExampleMessage.FromString(file.read())
```

Show Your Code ...

Query Host Name

```bash
> hostname
u1-22
```

Run Screen Sharing

```bash
> x11vnc -viewonly
```

6 Assignment Part II

Assignment

Performance

Measure the performance of your implementation.

Experiment Design

Stick to the following, or provide arguments for why not:

- Random field mix, each field with probability 1/2.
- Measure at least two minutes long traffic.
- Report average invocation throughput.
- No printing during measurement.
- Compare with past assignments.

Submission

GitLab
Use your personal GitLab repository under https://gitlab.mff.cuni.cz/teaching/nswi163/2022

Requirements
- Use the assignment subdirectory.
- Write brief report in SOLUTION.md.
- Include build scripts with instructions.
- Do not commit binaries or temporary build artifacts.
- Tag your solution with task-02 and push the tag.
