

# Program Synthesis

<http://d3s.mff.cuni.cz>

Department of  
Distributed and  
Dependable  
Systems

*Pavel Parízek*

CHARLES UNIVERSITY IN PRAGUE

faculty of mathematics and physics

# Introduction

- Goal: discovering executable programs that realize some task
- Motivation: simple repetitive tasks
- Selected target domains
  - Basic textbook algorithms (sorting, graphs)
  - Complex bit-vector manipulation routines
  - Simple text string manipulation programs
  - Mutual exclusion (thread synchronization)

# Dimensions

- Expressing the user intent
  - few pairs of input-expected output examples
  - demonstrations of program behavior (traces)
  - logical relations between inputs and outputs
- Search space of programs
  - Restrictions: control structure, allowed operations
- Efficient search technique
  - Exhaustive brute force search (over the whole space)
  - Machine learning (probabilistic, genetic programming)
  - Logical reasoning (constraints, induction, SAT/SMT)

  - generating programs (Scala code) from logical constraints (specifications) based on decision procedures (SMT)
- P.A. Abdulla, M.F. Atig, Y.-F. Chen, C. Leonardsson, and A. Rezine. **Counter-Example Guided Fence Insertion under TSO**. TACAS 2012, LNCS 7214.
  - automatic inserting fences (barriers) to concurrent programs (TSO model)
  - goal: eliminate undesired and incorrect behavior (thread interleavings)
  - barrier prevents reordering instructions under the weak memory models
